CLAIM AMENDMENTS

Claims 1-8, 10-12 and 14-21 are pending; claims 9 and 13 are canceled and claims 1 and 10 have been amended herein.

1. (Currently Amended) A file list display apparatus, comprising:

a recording medium for recording files;

a detection unit for detecting an entire list of files recorded in the recording medium;

a storage unit for storing the entire list detected by the detection unit;

an input unit for inputting a display command for displaying a sub-list ~~having a predetermined number of files selected in an entire list of the files recorded in a recording medium~~;

~~a display unit for displaying the sub-list; and~~

a controller for creating one or more sub-lists having a predetermined number of files from the entire list stored in the storage unit[[,]] ~~each sub-list being different from the other sub-lists, and controlling the display unit to successively display each of the sub-lists through the display unit~~ whenever the display command is input ~~through the input unit~~; and

a display unit for displaying the created sub-list.

2. (Previously Presented) The file list display apparatus according to claim 1, wherein each of the sub-lists is created by grouping the files successively listed in the entire list by the predetermined number of the files.

3. (Previously Presented) The file list display apparatus according to claim 2, wherein the display command includes:

a forward display command for successively displaying the sub-lists according to a forward list order of the files; and

a backward display command for successively displaying the sub-lists according to a backward list order of the files.

4. (Original) The file list display apparatus according to claim 3, wherein the input unit is a manipulation panel having a plurality of manipulation buttons for inputting the display command.

5. (Original) The file list display apparatus according to claim 4, wherein the display command is input by a combination of no more than two of the manipulation buttons.

6. (Previously Presented) The file list display apparatus according to claim 5, wherein

the manipulation buttons include a forward skip button, a backward skip button and a mode set-up button, and

the forward display command is input by a combination of the forward skip button and the mode set-up button, and the backward display command is input by a combination of the backward skip button and the mode set-up button.

7. (Original) The file list display apparatus according to claim 6, wherein

the forward skip button is a button for inputting an update command for updating one of the files in the sub-list according to the forward list order, and

the backward skip button is a button for inputting an update command for updating one of the files in the sub-list according to the backward list order.

8. (Previously Presented) The file list display apparatus according to claim 7, further comprising a cursor button for selecting at least one of the files in the sub-list,

wherein the updating of the files by the forward skip button and the backward skip button is performed in regard to the file selected by the cursor button by changing the selected file with one of the files of a sequentially previous sub-list or a sequentially subsequent sub-list, respectively.

Claim 9. (Canceled)

10. (Currently Amended) A file list display method, comprising the steps of:

reading an entire list of files recorded in a recording medium;

storing the entire list read from the recording medium into a storage unit;

creating one or more sub-lists having a predetermined number of files selected [[in]] from the entire list stored in the storage unit, each sub-list being different from the other sub-lists, whenever a display command is input; and

successively displaying each of the sub-lists created in the creating step whenever the display command is input.

11. (Previously Presented) The file list display method according to claim 10, wherein each of the sub-lists is created by grouping the files successively listed in the entire list by the predetermined number.

12. (Previously Presented) The file list display method according to claim 11, wherein the display command includes:

a forward display command for successively displaying the sub-lists according to a list order of the files; and

a backward display command for successively displaying the sub-lists according to a backward list order of the files.

Claim 13. (Canceled)

14. (Previously Presented) A method of controlling a file list display apparatus having a plurality of files of data recorded on a vast-capacity recording medium, said method comprising:

detecting all the files recorded on said vast-capacity recording medium;

storing a list of said detected files in a storage unit separate from the vast-capacity recording medium;

creating one or more sub-lists of said list stored in said storage unit

displaying one of said sub-lists;

detecting an input of a display command or a skip command;

displaying a next sub-list or a previous sub-list, when said display command is detected;

displaying, when said skip command is detected, said list in a forward or backward sequential one-by-one scrolling manner having no more than a predetermined number of files in said list displayed at any one time.

15. (Original) The method as set forth in claim 14, said skip command being detected by determining whether a rewind button or a fast forward button has been activated.

16. (Previously Presented) The method as set forth in claim 14, said display command being detected by detecting activation of a mode button in combination with activation of a rewind button or a fast forward button.

17. (Original) The method as set forth in claim 14, said display command being detected by detecting activation of either of a rewind button and a fast forward button when a mode button is in an on state, and said skip command being detected by detecting activation of either of said rewind button and said fast forward button when said mode button is in an off state.

18. (Original) The method as set forth in claim 14, each said sub-list comprising a different group of said files, each said group comprising said predetermined number of files.

19. (Original) The method as set forth in claim 14, wherein said files are grouped sequentially to form said sub-lists.

20. (Original) The method as set forth in claim 18, wherein said files contain music data and are grouped according to a one of a song title, an album a song came from, an artist who did the song or a song's genre.
